Fielder Kentucky Bluegrass (SPTR 2959) (*Poa pratensis*) with excellent wear tolerance and high turf quality is an ideal choice for all bluegrass blends. The rapid establishment of Fielder makes it an important component whether you have a new turf stand or are doing repairs.

Fielder should be included whether you are planting or repairing a sports field, a home lawn, a golf course fairway or rough. Fielder was developed from the cross Shamrock x America and has the advantages of both of these landmark cultivars. Deep, extensive rhizomes for great shear strength and recovery, with persistence under

different types of management are hallmarks of Fielder. Fielder has excellent winter color and greens up early in the spring for a longer growing season. It also tolerates a low light intensity. The early rhizome formation of Fielder enables sod growers to harvest sooner.

Fielder has excellent resistance to major turf diseases including Dollar Spot, Stem Rust and Pink Snow Mold. It also has high resistance to Summer Patch and Leaf Spot. It has exhibited excellent drought tolerance with rapid recovery. Fielder has a medium dark green color and high density all year round, with medium texture. Fielder is ideal for inclusion in blends with other Kentucky bluegrasses and mixtures with perennial ryegrass, tall fescue and fine fescues.

To determine whether a cultivar's performance is different from another, subtract one entry's mean from another entry's mean. If this value is larger than the LSD value, the observed difference in cultivar performance is significant and did not happen by chance. Complete tables are available upon request.
