

Seed Research of Oregon Announces Superintendent of the Year — 2004

Seed Research of Oregon is proud to announce that their Superintendent of the Year Award for 2004 has been given to Mr. Steve Gonyea, CGCS of Brasstown Valley Resort in Young Harris, Georgia.

Seed Research of Oregon's Golf Course Superintendent of the Year award is given annually to recognize a superintendent for their professionalism, inventive spirit, commitment to the environment and superior golf course conditioning.

Frank Lopes of Turfnology, Inc. nominated Steve Gonyea for his self-driven leadership, exceptional green surfaces, passion for the environment, and for his professionalism. Steve's dedication to the art of golf course management has made him one of the finest turfgrass professionals in the southeast.

Steve Gonyea's Dominant greens are a blend of SR 1020 and Providence (SR 1019) creeping bentgrasses — two industry standards for quality, performance and reliability. For nearly 20 years, top-notch superintendents, like Steve Gonyea, have relied on the unbeatable heat and drought tolerance of SR 1020 and the

excellent disease resistance and cool weather performance of Providence. Combining the two produces an exceptionally durable, upright, and disease resistant tournament-quality turf in any season.

Steve has been a long-time Seed Research of Oregon user with over eleven years of management experience with Dominant creeping bentgrass greens. For more details on his course, please check www.brasstownvalley.com

Seed Research of Oregon is one of the leading bentgrass breeding, production and distribution companies worldwide, with many different varieties of bentgrass and other top quality turfgrass species available to match specific climate, soil and management conditions.
